

e·host DATABASE HOSTING

CHUCK OUT YOUR SERVERS

You can use the internet and our services to give you the freedom to run your IT systems without the costly, inefficient and troublesome baggage that goes with them.

Our unique *e host* service allows you to run your business while we run your system.

HOW DOES IT WORK?

It's very simple. We host all your databases and applications on our high-specification file servers located at our offices. We install communications links from each of your offices to your internet service provider, or direct to ourselves. When your staff want to run an application, they access our server via their web browser and the communications link.

The process is transparent to the user - as far as they are concerned they are running an ordinary desktop application.

HOW DO YOU BENEFIT?

LOWER RUNNING COSTS

You will benefit from reductions in expenditure on your infrastructure and in the effort spent supporting it. Just think of the savings in costs and management time if you didn't have:

- file servers
- network software (e.g. NT, Novell, Unix)
- database engines
- IT support engineers
- database administrators.

We can provide these services just as effectively from our offices, at a significantly lower cost.

ZERO DEPLOYMENT COST

Your applications will run anywhere in the world from any PC with access to the internet. There are no files which need to be installed.

IMPROVED SERVICE

We can provide, as standard, services which would normally be prohibitively expensive, such as:

- fault tolerance and disaster recovery
- 24 hour support
- regular upgrades of hardware and software to give improved speed and reliability.

WHAT CAN BE SUPPORTED?

We can run any database which uses one of the major database management systems (e.g. Oracle, Informix, Microsoft SQL Server). New applications developed using a web interface (including intranets) will be able to run as they stand.

Legacy or client/server applications may need changes to their user interfaces to run in this way, but the technology is available at reasonable cost.

We will soon extend the *e host* service to include web-based office software. You will then be able to get rid of all your internal IT systems.

WILL YOU BE SUPPORTED?

We will provide a comprehensive support service to all your staff who use the system, via e-mail, phone or fax. To allow for operation of offices in different time zones we can offer 24 hour support.

Our engineers will ensure the smooth operation of any databases and applications that we host.

HOW MUCH WILL IT COST?

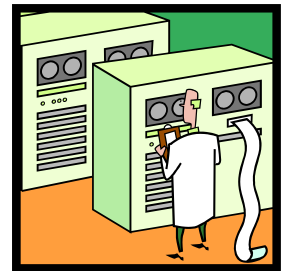

We will charge either a variable cost by usage or a fixed cost according to the service we provide.

However, we guarantee that we can cut your IT spend, even in the short term.

BACK TO THE FUTURE?

You can look at the *e host* idea either as a part of the trend towards outsourcing or as a return to the 60s, when applications ran on mainframe computers provided by bureaux.

Either way, the *e host* service allows you to simplify your IT, improve the quality of your systems and to cut costs.

WHO ARE OUR CLIENTS?

We provide outsourcing, development and support services to organisations such as Rothmans, PolyGram, The British Council, PriceWaterhouse-Coopers and Wandsworth Borough Council.

We are market leaders in the deployment of database applications over the internet.

HOW DO YOU FIND OUT MORE?
